Standard Motor Products Expands Climate Control Portfolio with New Line of OE-Engineered A/C Condensers

LEWISVILLE, Texas – Oct. 28, 2026 – Standard Motor Products, Inc. (SMP), through its Temperature Control Division and flagship Four Seasons® brand, has introduced a comprehensive line of A/C condensers engineered to meet OE performance specifications across a broad range of foreign name plate and domestic vehicles.

The new line provides market leading coverage for domestic and import vehicles and is backed by more than 100 years of experience serving the automotive aftermarket. Engineered to OE dimensional fit and thermal performance specifications, Four Seasons A/C condensers deliver the quality and reliability professional technicians expect while helping distributors and repair facilities simplify inventory management.

Each condenser is manufactured as a direct-fit replacement with OE-style construction and cooling capacity to support proper system performance and efficient installation. Units include the required sealing components for a complete, leak-free installation and are packaged to protect critical heat-exchanger fins and connections during shipping and handling.

With the addition of A/C condensers, customers can source complete A/C system repair solutions from a single, trusted supplier. The Four Seasons climate control portfolio includes new and remanufactured compressors, evaporators, accumulators, receiver driers, expansion devices, hoses and repair kits.

“Adding premium A/C condensers to the Four Seasons portfolio reinforces our commitment to providing complete thermal management solutions for professional installers,” said Jack Ramsey, senior vice president of sales and marketing at Standard Motor Products. “With OE-engineered performance, extensive application coverage and a full range of HVAC components from a single source, we are helping distribution partners reduce complexity and giving technicians confidence in every repair.”

About Standard Motor Products:
Standard Motor Products, Inc. (NYSE: SMP) is a leading manufacturer and distributor of premium replacement parts for our customers in the automotive aftermarket. For over a century, we've been dedicated to engineering top-performing replacement parts for vehicles worldwide. From cutting-edge sensors and precision Gasoline Direct Injectors to advanced climate control systems, our commitment to research and precision manufacturing ensures every part inside our box performs flawlessly and lasts.
